Education

Vellore Institute of Technology, Vellore, India

B.Tech in Computer Science with specialization in IoT

Actively seeking a full-time internship opportunity for the period January to June 2026

Expected May 2026

CGPA: 8.57

Technical Skills

Languages: TypeScript, JavaScript, Python, C, C++, Arduino

Frameworks/Libraries: Next.js, Angular, Flask, Node.js, Express.js, Svelte, SvelteKit, React Native, Tailwind CSS, Redux, Tensorflow, Pytorch, Pandas

Tools/Technologies: MongoDB, Docker, AWS, OpenAI API, Gemini API, Embedded Systems

Experience

Contentstack

Bangalore, India | May 2025 – Jul 2025

Associate Software Engineer Intern

- Designed and implemented a 100% interactive, customizable drag-and-drop interface for building agentic AI workflows using React Flow and TypeScript, enhancing usability and modular AI agent configuration.
- Built and published a reusable npm package of all the components and types, allowing seamless integration across other platforms and projects, promoting component reusability and open-source distribution.
- Designed a scalable data structure to support Langflow-compatible JSON workflows, enabling fast import/export, versioning, and cross-platform deployment.

TalentRecruit Software Pvt. Ltd

Bangalore, India | May 2024 – Jul 2024

Software Development Intern

- Integrated several third-party services including WhatsApp, HackerRank, Mercer, Seek, Office365, and Gmail, streamlining communication, recruitment, and productivity tools within the application.
- Lead the development of an AI parser, delivering a final ready product using Python and Flask, which enhanced data processing capabilities and improved parsing capabilities by 35%.
- Improved website security by 30% through resolving numerous VAPT issues and implemented key features such as Gmail and WhatsApp integration, enhancing user engagement and communication efficiency.

PinkHippo

Remote | Feb 2024 – Apr 2024

Web Developer (Freelance)

- Led the end-to-end development of a Minimum Viable Product (MVP) for a freelance client under PinkHippo, delivering a scalable and production-ready web application.
- Utilized Three.js and React Three Fiber to build interactive 3D experiences, enhancing product visualization for influencers and boosting user engagement.
- Contributed to client growth by attracting 20+ new customers and driving investor interest from multiple VCs, positioning the product for future funding and market expansion.

Streetflux

Remote | Jul 2024 – Sep 2024

Web Developer (Freelance)

- Architected and developed an ecommerce microservice using Next.js, TypeScript, and Golang as part of a team at Streetflux.
- Led the development of a scalable solution by coordinating with product, design, and engineering teams, enhancing user experience by 40% and increasing system reliability by 35
- Successfully reduced operational costs by 30

Intellicuria

Remote | Dec 2023 – Jan 2024

Software Development Intern

- Spearheaded the development of their main product - Clinisio by leveraging industry standard frameworks and tools such as Next.js, Tailwind CSS, and Redux.
- Designed and developed a user-friendly, industry-grade product, successfully beta tested by 50+ medical professionals across India, ensuring real-world usability and reliability in clinical settings.
- Collaborated with cross-functional teams to integrate feedback and deliver iterative improvements, enhancing product adoption and satisfaction.

Leadership Experience

CodeChef-VIT

Vellore, India | Aug 2024 – July 2025

Frontend Lead

- Led cross-functional teams in design, development, and deployment of high-impact web experiences.
- Spearheaded multiple projects and events, attracting 35K+ unique users and driving 500K+ page views, alongside an annual footfall of 2000+ attendees.
- Managed a core team of 100+ members, fostering collaboration and mentoring members to grow both technically and professionally.

Projects

Last Mile MCP + Agent

- Developed an intelligent agent system powered by a Model Context Protocol (MCP) server to analyze disruptions in last-mile logistics and generate adaptive, real-time solutions.
- Integrated 40+ tools and samplings, including Google Maps API for dynamic routing, Twilio for SMS alerts, and SMTP for automated customer communication and notifications.
- Designed the system to self-learn from disruption patterns, enhancing efficiency and resilience in delivery operations while reducing delays and improving customer satisfaction.

IoT OTA Firmware Update Protocol CLI

- Engineered a secure and efficient Over-The-Air (OTA) firmware update protocol tailored for edge devices including Raspberry Pi and NVIDIA Jetson.
- Built a custom CLI tool to manage update rollouts, simulate deployments in real-time, and monitor device status to prevent bricking during updates.
- Implemented robust version control, rollback mechanisms, and cryptographic validation to ensure update integrity, reliability, and security across distributed devices.

AI-Enabled Rich Text Editor with Callouts and Inline Suggestions

- Built a feature-rich editor using Tiptap Starter Kit, supporting headings, bold, italic, underline, and advanced custom nodes.
- Implemented callout sections with seamless nesting, keyboard shortcuts, and dynamic type-switching, alongside a slash command menu for fast content insertion.
- Developed an AI-powered inline editing system leveraging ProseMirror decorations, enabling contextual edit suggestions with accept/reject interactions while preserving custom nodes like callouts.

FFCS Combogen

ffcs.codechefvit.com

- Served as Lead Frontend Architect for a full-stack application built with Next.js and TypeScript, using MongoDB for data storage.
- Enabled students to generate personalized timetables seamlessly through an intuitive and scalable interface.
- Attracted 10K+ unique visitors and recorded 35K+ total page views.

Past Papers Portal

papers.codechefvit.com

- Architected and developed a large-scale full-stack application using Next.js and TypeScript, with MongoDB powering backend data storage.
- Built a repository for past exam papers with powerful search and filtering, serving as a high-utility resource for students.
- Achieved 40K+ unique users, 800K+ page views, and 1.6M+ event interactions.

CookOff Portal (graVITas '24)

- Architected and deployed a high-performance contest portal for CookOff 9.0, built with Next.js and TypeScript.
- Integrated Judge0 API for real-time code execution and evaluation, ensuring secure and seamless contest workflows.
- Optimized the platform to handle 2000+ concurrent participants, delivering a reliable and lag-free competitive programming experience.

DevSoc Portal

- Led the end-to-end development of the official DevSOC hackathon portal, supporting registrations, team formation, submissions, and judging.
- Designed a scalable backend using Go and Echo with PostgreSQL, ensuring efficient handling of participant data and hackathon workflows.
- Delivered a responsive Next.js + TypeScript frontend, enabling 1500+ participants and organizers to manage projects seamlessly throughout the event.
